

Hosebun

Hose is not cheap, yet time after time people hoist, suspend and manipulate their hose with inferior products. The Hosebun™ is the absolute best hose suspension device in the world, we know because our customers tell us.

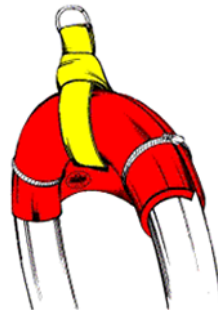

A Hosebun™ is a polyurethane saddle designed to suspend hoses. Each model comes complete with its own treated nylon sling which is fastened in a choker position and is designed to accommodate the manufacturers' minimum bending radius to protect the hose from kinking and prolonging the life of the hose.

In addition to extending/prolonging the life of your hose, a Hosebun™ will prevent it from kinking or otherwise becoming compromised. Depending on the nature of the material to be transported, kinked or damaged hose can be dangerous or even fatal.

Where would you use a Hosebun™?

SMALL BORE APPLICATIONS (1" to 4")

- ALL FUELING STATIONS
(often used with retractors)
- HYDRAULIC HOSE
- BUNDLED INDUSTRIAL HOSE
- PUMPING OPERATIONS
- THEATRICAL POWER CABLES
- and many more

LARGE BORE APPLICATIONS (6" to 12")

- OFFSHORE DOCK HOSE
- FISH SUCTION HOSE
(reducing bruising dramatically)
- VACUUM HOSE
- VAPOR RECOVERY HOSE
- MATERIAL HANDLING HOSE
- FOOD GRADE HOSE
- and many more
